

KEGNADO™

keg stirrer for Cornelius kegs

AGRICULTURAL & INDUSTRIAL

WHAT IS KEGNADO™?

Originally developed for research sprayers where the spray cocktail may be subject to separation. Kegnado™ keg stirrer fits inside any Cornelius keg and continuously agitates the contents under full rated keg pressure.

WHY DO YOU NEED ONE?

Keep your batch evenly mixed! With Kegnado™, you can stop guessing about unknown variation with powders, suspension, emulsions, and other difficult mixes. Now you can assure the first drop of spray is exactly the same as the last.

LABORATORY

Fermentation, small-scale reactions, and maintenance of compounded suspensions all can require a stirred vessel to guard against separation.

AGRICULTURE

Kegnado™ enables researchers to keep fertilizers, pesticides and other chemicals evenly mixed during field tests for safety and efficiency.

MANUFACTURING

No more shaking kegs! Perfect for small metered flow batches. Keep mixtures from separating and save thousands annually in operating costs.
